Abstract
The aim for this thesis is to advertise Admira Hospital to gain more customer and to facilitate them about the location of the facilities in the hospital, the schedule and the flow of the facilities in an interactive way and also to increase the awareness of emergency process inside the hospital. The application is made using Flash. This application can show clinic location, doctor’s schedule, emergency route and the flow for the facilities. The testing for this application are functionality testing by using Mozilla Firefox, Google Chrome in PC and Browser from Android OS. The next testing is the User Acceptance testing where the application is tested by the client and other people outside the project to make user the interface is user friendly and accepted by the public. The result of this application is that the client accepted the application and it already accomplished the task that the client wanted.
