Abstract

Background

Occupation has been a major issue in the world these days. With large number of graduates that are graduating from the college or the university with certain degree, these people need to find the right occupation for them. There are numerous types of occupation in the world and with many varieties of the occupations that are available, it is important to sort which one of these available openings that match the degree that graduates have. This paper will explain the gaps that the existing solution has and also will propose a solution towards the gap. This working prototype is created using PHP and MySQL for the database and PHPMyAdmin for the administrator site. With the gap exist in several job searching online, this prototype is able to solve the gap and also giving extra features.

Key words: Online Job Search Engine, Job Advertisement, Job searching online
