

## **ABSTRACT**

Communicative language teaching approach is usually used to teach students (especially on beginner level students). This method uses picture, game, information gap, role play as an instrument. Most children like to study using that kind of instruments, so they do not easily get bored with the lesson. Therefore the writer would like to find out the better method at CEIF English course by implementing this method. Basically CEIF English course uses PPP method, so the writer wants to apply CLT method on CEIF English course by teaching there six times. The writer collected the data through the pre-test and the post-test. And as a result of the research is the method not too effective at CEIF because the test given is too easy.
