ABSTRACT

Project management process dissemination and monitoring system is developed to disseminate general business process as well as specific project process for different projects, and to support digitalization and monitoring of projects in PT. XYZ. The objective of this thesis is to design a good interface for a project management web application according to the criteria of good interface. The purpose is to provide nice user interface with simple navigation, to ease user and increase user interest in accessing the application. By implementing good interface, employee will have interest to access the web application and it is expected that the company can provide fast information to its employees. In conclusion, designing good interface and having support from users to use the application will greatly assist the application implementation to achieve its goals and objectives.

Keywords: User Interface, Project Management, Business Process, Project Monitoring.
