ABSTRACT

There is a felt need to study whether the information system automation developed and implemented at Bina Nusantara University have met user's satisfaction. This study is done by two methods. First, literature study is done to collect information about information system automation and to choose appropriate statistical methods to analyze the research results. Second, distributing questionnaires to the respondents to get the data for analysis. Then the data obtained are analyzed by gap analysis and Spearman correlation method. The result shows that there is a positive correlation between system performance and user's expectation meaning that the better the performance the users will more satisfy. However, in the gap analysis, no variable matches user's expectation. It is concluded that is a close relationship between system's performance and user's expectation but the performance of the system is below user's expectation.
ACKNOWLEDGE

First of all, I would like to show my thanks to God for helping me to accomplish this research paper.

I also would like to thank the Head of English Department Faculty of Letters, Dra. Wiwik Andreani, and all the lecturers who have guided me during my study in Faculty of Letters.

I am especially thankful to my mentor, Drs. Muhartojo, M.A, who has spent his time in giving direction, correction, and advice for me in finishing this research paper.

My greatest thanks is to my parents who have given me the chance to study in Bina Nusantara University by supporting me in many ways. I also appreciate all of my friends.

Finally, I wish this paper will give advantages to the readers.

CONTENTS

Abstract........................................................................................................ iv
Acknowledgments......................................................................................... v
Contents........................................................................................................ iv

Chapter 1 Introduction

1.1 Background of Study...............................................................................1
1.2 Statement of Problem............................................................................2
1.3 Hypothesis............................................................................................2
1.4 Scope and Limitation............................................................................2
1.5 Goal and Function..................................................................................3
1.6 Research Methodology..........................................................................3

Chapter 2 Literature Review

2.1 The conception of automation...............................................................5
2.2 The conception of information system...............................................5
2.3 The conception of information system automation...........................6
2.4 The conception of user's satisfaction....................................................7
2.5 The conception of statistics.................................................................7
   2.5.1 Gap analysis..................................................................................7
   2.5.2 Spearman correlation....................................................................8
2.6 Quality of information system.............................................................8
2.7 Requirements of information system automation.............................9
2.8 Criteria of user's satisfaction...............................................................10
Chapter 3  Research results

3.1 Research objects ................................................. 13
3.2 Research steps .................................................... 13
3.3 Research models .................................................. 14
3.4 Research variables ................................................ 15
3.5 Research data ....................................................... 16
3.6 Data analysis methods ........................................... 16
3.7 Validity and reliability check .................................... 19
3.8 Research result analysis ......................................... 20

Chapter 4  Conclusion and suggestion

4.1 Conclusion .......................................................... 28
4.2 Suggestion ........................................................... 28

Chapter 5  Summary
